The creativity that children possess needs to be cultivated throughout their development. Research suggests that overstructuring the child's environment may actually ① limit creative and academic development. This is a central problem with much of science instruction. The exercises or activities are devised to ② eliminate different options and to focus on predetermined results. The answers are structured to fit the course assessments, and the wonder of science is ③ appreciated along with cognitive intrigue. We define cognitive intrigue as the wonder that stimulates and intrinsically motivates an individual to voluntarily engage in an activity. The loss of cognitive intrigue may be initiated by the sole use of play items with predetermined conclusions and ④ reinforced by rote instruction in school. This is exemplified by toys, games, and lessons that are an end in and of themselves and require ⑤ little of the individual other than to master the planned objective.
